

UPI TRANSACTIONS POWER BI DASHBOARD

1. Power Query Editor

1. The workspace in Power BI for preparing and transforming raw data.
2. Enables data cleaning, reshaping, and combining from multiple sources.
3. Produces a clean, analysis-ready dataset before building reports and dashboards.

2. Syncing Slicers

1. Allows the same slicer to be used across multiple pages or visuals.
2. Ensures consistent filtering throughout the entire report.

3. Bookmarks

1. Save and apply different view states of a report.
2. Can include filters, sort orders, and visibility settings.
3. Useful for toggling between different visualizations (e.g., switching from one chart to another).

4. Navigator

1. Appears when connecting to a data source.
2. Lets you browse, preview, and select specific tables, sheets, or queries.
3. Allows loading or transforming only the needed data into the report.

5. Button Navigator

1. A navigation button inside Power BI reports.
2. Allows users to move between report pages, bookmarks, or views.
3. Improves interactivity and provides a **dashboard-like experience** for end users.
